

In-Depth Look at Ticket Booking Systems

This presentation delves into the technological advancements, market dynamics, and user interactions that shape today's ticket booking industry.

Presenter Name

Name of Group Members

Ticket Booking System Goals

Key objectives for an optimal booking experience

Simplified Booking Process	Intuitive navigation for easy ticket booking.
Fair Scheduling	FCFS prioritizes ticket processing fairly.
Efficient Data Handling	Management of passenger details and schedules.
Payment Flexibility	Multiple payment options for user convenience.

Understanding FCFS Algorithm

An Overview of First-Come, First-Served Processing

Passenger Queueing Based on Arrival

Passengers are queued by their arrival time.

Sequential Ticket Processing

Tickets are processed in the order of the queue.

Efficiency Metrics Provided

System displays average waiting and turnaround times.

Key Features of the System

Explore the main functionalities of our system

Home Page

Attractive layout with a clear 'Get Started' button.

Booking Page

Input passenger data and select travel preferences.

Payment Page

Multiple payment options like bKash and credit cards.

Benefits of the FCFS Algorithm

1

Fair and Equal Treatment

Ensures all passengers are treated equally.

2

Simplicity

Easy to understand and implement for users.

3

Efficiency

Works best in scenarios with minimal variation.

Ticket Booking System Results

Key outcomes from the system's launch and features

Seamless UI/UX

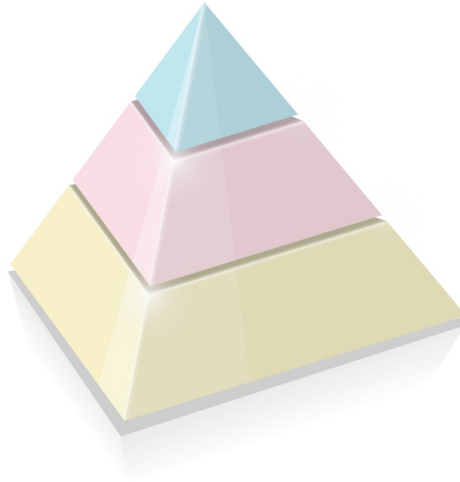

Achieved an appealing and functional user interface.

1

Multiple Payment Gateways

Integrated various payment options for user flexibility.

3

Accurate FCFS Scheduling

Implemented first-come-first-serve scheduling with metrics.

2

Challenges and Solutions in Systems

Addressing Key Operational Challenges Effectively

Dynamic Passenger Management

Utilized JS arrays for efficient queue management.

Improved Navigation

Implemented logic for better user navigation.

Payment Integration

Developed forms for smooth transaction processes.

Ticket Booking System Conclusion

Key Insights and Future Enhancements

1

Effective Implementation of FCFS

The system uses FCFS for fair ticket booking.

2

Foundation for Future Enhancements

Establishes a base for further improvements.

3

Real-Time Database Integration

Future plans include live data for availability.

4

Priority Scheduling Implementation

Urgent bookings can be prioritized in the system.

5

AI-Driven Demand Prediction

Utilizing AI to optimize pricing and availability.
